FontSuite is an all-in-one font manager designed to keep all your fonts organized. Using all of your fonts is a pain, especially if your collection is large. In order to free your mind, FontSuite makes organizing your fonts simple, by enabling you to easily browse all fonts, and sort them based on type, manufacturer, and usage. You can also use the many tools available to analyze, compare, create, copy, and edit existing fonts. Among the most common functions, are the ability to edit font properties (such as color, size, case) and change their character sets. All fonts can be matched in a series of lists that enable you to view them all, or sort based on type, manufacturer, or usage. These are mainly useful to make sure all the fonts in your collection are consistent in regards to the appearance. Fonts can be compared to check which one is better, and copy them to the clipboard to be used on various projects. To make this even easier, several formatting options can be used to make the selected fonts more easily readable. You can highlight different parts of the selected fonts in order to make a particular character stand out. You can also change the font size and color to match the format of your project. Aside from these features, you can also create custom strings to be used for different purposes, such as app titles, wallpapers, folders, and more. You can use the same tool to make them all, or choose to copy the ones you like to the clipboard to be used later. What we like about FontSuite: The tool is so simple to use, that even newcomers can operate it, with minimal effort. The large variety of tools makes analysis and creation very easy. Moreover, it includes a variety of different tools for different purposes, such as comparison, analysis, or creation. CHAMELEON Speaks! is a software based communication protocol system, which enables you to talk to the Chameleon robot using a mobile app. CHAMELEON Speaks! has a wide variety of options, and impressive features. Moreover, it comes with a nice, easy-to-use interface. There are three main components of CHAMELEON Speaks! system: A smartphone app, which is pre-installed on the Chameleon robot. A PC software client, which runs on Windows or Linux. A command server, which is dedicated to the communication between a robot and a mobile app. Robots can communicate in two modes: over a WiFi network and without WiFi. When using WiFi, robots connect to the PC client, which allows them to control the whole system. When the robot is connected, it can see the robot itself and all its components. You can control and customize the robot to show an appropriate reaction to an incoming message. When the robot is off-line, its components communicate without an active WiFi connection. This is often called 'chatting'. You can also control your robot in this mode, but only what is visible from the robot. Chameleon robot is able to respond to incoming messages in a couple of ways: Answer the incoming message. The robot will play a specific sound. Record a specific sound. The robot will play it back later, using the previously recorded sound. Just speak. The robot will pick the text from an incoming message, and will speak it back. All the available components can communicate using a standard protocol, which allows them to be controlled easily. For instance, a command can be typed in a text field 81e310abbf
