So, the command you need to run is: aa -k That should be sufficient. Remember, that this command will create a "batch file" that you should be able to run. When you run the batch file, it will take you through the install process. You can create a batch file with: aa -k -u *.vmsettings.xml Remember to replace *.vmsettings.xml with the path you used when you installed the software. You can also replace *.vmsettings.xml with something like: update.vmsettings.xml And then run the batch file like so: aa -r update.vmsettings.xml.bat Let us know how you get on with it. A role for cysteine-rich zinc-finger domain-containing 2 in the regulation of signaling pathways related to disease and development. Cysteine-rich zinc-finger domain-containing 2 (CRY2), a novel member of the CRY family of proteins, is involved in the negative phototaxis of the marine cyanobacterium Synechococcus. Recently, the structure of the CRY2 protein was determined. This study represents the first crystal structure of a member of the CRY family and suggests that it is a unique class of regulatory proteins, with no homology to any other protein family. Here,
