## Vghdbotvg908account [UPD]

# [Download](#)

A: The variable `${@}` is what the shell passes to the backgrounded job. So the other backgrounded job sees `$@` as either only "one" item (a non-empty string) or as many items: `[jaypal:~] echo "$@" 1 2 [jaypal:~] echo ${@} 1 2 [jaypal:~] jobs -l [jaypal:~] jobs -r [jaypal:~] jobs -l [jaypal:~] jobs -r [jaypal:~] If you were to use "${@/// }" the extra slash in the substitution pattern will retain what was in ${@} for the job that is running $() instead of passing the entire set of arguments that was passed to the shell. [jaypal:~] echo "${@/// }" 1 2 [jaypal:~] echo ${@/// } 1 2 [jaypal:~] jobs -l [jaypal:~] jobs -r [jaypal:~] jobs -l [jaypal:~] jobs -r [jaypal:~] If you are running the $() in the background from within another shell, there's really no great reason to use ${@} and just call them directly. [jaypal:~] # a [jaypal:~] # b [jaypal:~] # b & [jaypal:~] b [jaypal:~] # c [jaypal:~] # a & [jaypal:~] a [jaypal:~] [jaypal:~] # a "$@" [jaypal:~] a 1 2 [jaypal:~] # a "${@}" [jaypal:~] a 1 2  
Abrupt drop Rapidly decreasing values due to a change in ground signal`
